

# Prevention for the What if Moments.

Did you know it takes most businesses 197 days to detect a breach on their network? How do you fight a breach you don't know about? Wouldn't it be nice to have the right processes in place to prevent a breach in the first place?

Cybersecurity is in a perpetual state of change which is why a comprehensive and customized Security-as-a-Service offering is critical to address the "What if Moments" before they happen. Our fully hosted, secure and compliant solution will provide constant monitoring of your critical infrastructure systems, providing the peace of mind you and your team deserve to keep you working effectively and efficiently. Our team will continually assess and adjust configurations based on current threats, compliance requirements and your organization's needs. We'll review automated alerts on all your devices - from firewalls, to switches, servers, and more - and notify you immediately when issues arise.

## Security-as-a-Service

### WHY Security-as-a-Service?
